## HiFi-Stereo-Headphone HD 414 X

The HD 414 X is the once more improved version of the first open stereon eagpnone. The dull black shells contain two especially developed transducer systems with a frequency response of 20 ± 20000 Hz. The impedance of each transducer system is 2000 Ω. Therefore it might be connected without problems to any moner or stereo amplifier. The soft train customs ensure excellent wearing number. Due to the low headphone terrains comfortable over when listinging for hours. The headphone straits are moteln adjustable on the dull black plastic headband.

The I (D A14 X is delivered with the proved and articinely study but flexible connection cable with steel conductors. Three healthforis models for available

#### Connection cables

HZL 26-33 (Art. No. 1783) 6 m long HZL 26-37 (Art. No. 1784) 6 m long The following connection cables which can be easily exchanged are available. The leads are marked req = right, yellow = left.

Cable with loudspeaker pings. HZL 26-4 Cable with DIN meadstrong multipling.
